

What is Clear Scope?

Clear Scope has been expressly formulated to treat the horse's respiratory system. It will assist in expectoration of the respiratory tract mucus caused by viral or bacterial infections in the trachea and or lungs. Clear Scope will assist in treating most types of respiratory conditions which involve mucus or phlegm.

Administration

Clear Scope should be administered orally in the prescribed dosage.

Initial Dosage: 50ml daily for 10 days

Maintenance: We recommend that you treat your horse regularly with a maintenance dose of 20ml daily to maintain clear airways

Available Sizes: 2 liters or 20 liters

Oral Decongestant and Expectorant for Horses – a treatment to assist in the relief of coughing and other clinical indications associated with respiratory ailments in horses.

How Does it work?

Clear Scope acts to liquefy and release mucus and congestion in the lungs and respiratory tract. With treatment, the mucus and phlegm are released from the lung cavities and respiratory tract walls, moving to the laryngeal area of the throat where normal breathing and coughing enables the foreign material to be expelled. Clear Scope is all natural and has no side effects. Treatment with Clear Scope will improve your horse's comfort, which obviously affects its performance. Clear Scope may be used during training as well as performance, and as a regular maintenance program.

Results

The results are clearly visible and are attested to by many leading trainers and veterinarians. Treatment with Clear Scope is indicated and suitable for horses of all ages. Many horses are not treated regularly for respiratory infections. When your horse comes in contact with infections, in a shared environment, at the racetrack or on the training track, there is a risk of infection. Regular maintenance with Clear Scope will keep you on top of the problem. Regular treatment with Clear Scope will result in no visible signs of mucus expulsion after 6 weeks.
